```java
/**
   Coffee Biller
*/

import javabook.*;

class CBill2
{
    public static void main(String args[])
    {
        // Declare and create the different objects
        MainWindow mainwin = new MainWindow();
        MessageBox mbox = new MessageBox(mainwin);
        OutputBox outputb = new OutputBox(mainwin);
        mainwin.show();
        mbox.show("Welcome to the Coffeee Biller !");
        outputb.show();
        InputBox inputb = new InputBox(mainwin);
        int nbbags = inputb.getInteger("How many bags");
        outputb.printLine("\t Number of bags ordered " + nbbags);
        outputb.printLine("\t\t Boxes used");
        outputb.printLine("\t X Large - $ XXX");
        outputb.printLine("\t X Medium - $ XXX");
        outputb.printLine("\t X Small - $ XXX");
        outputb.printLine("\t Your total cost is : $ XXX");
    }
}
```
